Lecprog stock management Crack For Windows is a Java-based app that facilitates a simple-to-use environment for creating and managing inventories. This is done by creating databases and by organizing inventory items into various categories. No setup required, besides Java As long as you have Java installed on the PC, you don't need to set up anything else. This means that you can save the app files anywhere on the disk or on a USB flash drive, and directly run Lecprog on any PC with Java. It shouldn't modify Windows registry settings. Create new databases for inventories The interface looks outdated. It's based on a large window with a plain appearance, where you are prompted at the first run to specify the path to the directory where you want to create a new database. It's possible to set up different databases in distinct locations. Create and manage categories and products The utility provides a list with sample categories of products which can be changed into something else or deleted, while new ones can be created on the spot by setting the group name and parent folder. You can also use a basic search tool to quickly locate a particular category. Lists with products can be obtained by selecting a group. Once again, Lecprog offers some sample products that you can examine, edit their properties, remove them from the list, or create new products from scratch by choosing a category and entering the product name and code, bar code, and initial stock. Multiple measurement units are available for the stock, such as gram, liter, meter, and square meter. Create and manage suppliers and entrances In a similar manner it's possible to create and manage a list with suppliers, where you can fill out details pertaining to the supplier's name and code, landline and mobile number, as well as physical and email address. A list with entrances shows valuable details about suppliers, like status (opened or closed), starting date and hour, and user-defined comments. It can be filtered by status or supplier. As far as program customization is concerned, you can pick the decimal separators between comma and period, or change the default date format.
